FW Elevator Pitches (1 min, 3 mins and 5 mins)

FW Elevator Pitches (1 min, 3 mins and 5 mins)

Three pitch lengths for introducing Future Works to a prospect. Use the one that fits the moment. Keep the position stable across all three: Future Works is the AI-native transformation engine, delivering in twelve weeks what incumbents quote at two years, with a third of every fee staked on value the client's Finance team validates. The category line is "AI transformation with skin in the game."

> Aligned to Positioning R11, locked 28 August 2026. Updated 4 September 2026.

Replace [NAME] with the speaker. Do not swap out the proof points or the twelve-week cycle language. Do not quote prices, percentage price comparisons, or the internal names of our frameworks. Do not describe the audience as "asset-heavy operators": that phrasing is retired.

---

1 minute version

Hi, I'm [NAME] from Future Works.

Most AI dies in pilots. Most transformation programs run for two years before anyone sees value on the P&L. We fix both.

Future Works is the AI-native transformation engine. We rebuild the operations that move the P&L (manufacturing, energy, health and life sciences, logistics, and supply chain) in twelve-week cycles, run by named senior experts who each orchestrate a fleet of AI agents. A third of every fee is staked on a value target your Finance team signs off. Service credit if we miss. Bonus if we exceed.

That is AI transformation with skin in the game.

Recent proof: NextPower, 75% faster time to market. JLL, a two-year AI roadmap unlocked in four weeks. Philips, a 3x return in twelve weeks, Finance-signed.

If you have a P&L problem AI can move and an executive willing to sign for the outcome, we should talk.

---

3 minute version

Hi, I'm [NAME], partner at Future Works.

Two numbers frame the problem. Seventy percent of transformation programs miss their targets. Most enterprise AI never leaves the pilot stage. The reason is the same in both cases: the delivery model. Large integrators bill time and materials, run multi-year programs, and stake nothing on the result. The buyer carries all the risk.

Future Works is the AI-native transformation engine. Our category line is AI transformation with skin in the game, and we mean it literally. We rebuild core operations in twelve-week cycles. Each cycle is run by a small pod of named senior experts (Lead Architect, Principal Engineer, Data Steward, Outcome Owner) who each orchestrate a fleet of AI agents on our proprietary AI-native operating system. No labor pyramid. No swap-outs after kickoff.

The commercial structure carries the promise. Every cycle fee is split into three equal tranches. One at mobilization. One at build and deploy. One at value verification, released only when the client's Finance team signs off against a baseline locked in week two. Miss the target, that tranche converts to a service credit against the next cycle. Exceed it, we earn a 15% bonus on the value above target.

Where this has landed:

- **Philips**, a 3x return in twelve weeks, Finance-signed and self-funding the next cycle.
- **NextPower**, 75% faster time to market on a critical energy workflow.
- **JLL**, a two-year AI roadmap unlocked in four weeks across a global real estate portfolio.

We qualify on three things: a real P&L problem AI can move, an executive willing to sign for the outcome, and an operator-level champion inside the business. If that fits, the next step is a scoping conversation to lock the value baseline.

---

5 minute version

Hi, I'm [NAME] from Future Works.

I'll cover four things: what Future Works is, the problem we solve, how we deliver, and the proof.

What Future Works is

Future Works is the AI-native transformation engine. Our category line is AI transformation with skin in the game. We work across manufacturing and industrials, energy, health and life sciences, logistics and transportation, and consumer products, plus the supply chain and finance workflows that sit alongside them. We are a delivery system that produces operational outcomes, not an advisory relationship. Secure, composable, auditable, in that order.

We are not a systems integrator, and we are not an AI vendor. We are the engine that turns AI investment into P&L outcomes inside a quarter.

The problem we solve

Three things break at the same time in most enterprises:

1. AI stalls in pilots and never reaches production where the P&L lives.
2. Transformation programs run for years, over budget, with value promised late.
3. Incumbent integrators bill time and materials and stake nothing on the result.

The buyer feels all of this as risk. Slow, expensive, and carried entirely by them. That is the market we compete in.

How we deliver

Three mechanics do the work.

Twelve-week cycles. A program is a sequence of cycles, not a multi-year commitment. Weeks 0 to 2, we mobilize and lock a value baseline with the client's Finance team. Weeks 2 to 9, we build and deploy in a sandbox first, then into production. Weeks 10 to 12, we verify the value against the baseline. Every cycle produces a shipped outcome.

Named senior experts plus AI agents. A small pod of named senior operators runs the cycle. Each expert orchestrates a fleet of high-accuracy AI agents on our proprietary AI-native operating system. Substitutions require client sign-off. No pyramid staffing, no swap after kickoff.

Outcome-staked fees. A third of every cycle fee rides on a value target the client's Finance team validates. Miss the target, that tranche converts to a service credit toward the next cycle. Hit the target, the full fee is confirmed. Exceed the target, we earn a 15% bonus on the value above it. This is a structural feature of our cost model, not a promotion. A time-and-materials cost structure cannot support it.

Seven commitments sit underneath this: Named Senior Experts, Value-Based Fees, Sub-12-Week Phases, Change-Order-Free Sprints, Transparent Resource Plan, Vendor-Agnostic Architecture, and Auditable by Design. Vendor-agnostic matters for anyone with an existing tech estate: we build on AWS, Azure, and Databricks, and we design around the client's stack, not against it.

The proof

Client	Domain	Result
Philips	Health and life sciences supply chain	3x return in twelve weeks, Finance-signed, self-funded the next cycle

NextPower	Energy operations	75% faster time to market on a critical workflow
JLL	Commercial real estate	Two-year AI roadmap unlocked in four weeks across a global portfolio
Boom	Aerospace and defense	Engineering workflows agentified and shipped into production
Staples	Retail and supply chain	Twenty digital products delivered in twelve weeks

Industries are proof, not the offer. Lead with the problem and the capability, then anchor with the closest proof point.

Trust: GDPR-compliant delivery, with SOC 2 Type II and ISO 27001 certification audits in progress and on schedule. Describe these as audits in progress, never as held certifications. Built on AWS, Azure, and Databricks.

Who this is for

We qualify accounts on three traits: a real P&L problem AI can move, an executive willing to sign for the outcome, and an operator-level champion inside the business. If those three are in place, the next step is a scoping conversation to lock the value baseline. Twelve weeks after that, the outcome is on the P&L or we have not earned the last tranche.

That is Future Works. What's the best time to set up a working session with your team?
