FW Positioning, Problem, Solution, Guarantee and more (Vendors)

FW Positioning, Problem, Solution, Guarantee and more (Vendors)

This page is the vendor-facing reference for how Future Works positions itself in market. Use it to align messaging, understand our category, and represent Future Works accurately in shared materials.

> Aligned to Positioning R11, locked 28 August 2026. Updated 4 September 2026.

Category

AI transformation with skin in the game.

That is the category line. Use it as the lead.

The frame is "the AI-native transformation engine," used with no audience noun after it. "Engine" is deliberate: Future Works is a system that produces operational outcomes, not an advisory relationship. "Skin in the game" is deliberate too: a third of every fee rides on a value target the client's Finance team validates.

The subhead line for eyebrow and subhead surfaces is: **Outcome-based AI transformation, delivered in twelve-week cycles.**

Internally we also describe this as an AI Native Operating Partner, and as Service as Software. Neither is the public lead.

Do not use "asset-heavy operators" or "asset-heavy enterprises." Both are retired as public descriptors. There is no catch-all noun to swap in. In a category or hero sentence, use the category line or "AI-native transformation engine" with no audience noun. In an audience-list sentence, drop the noun and keep the industries, for example "we work across manufacturing, supply chains, energy, and health."

Every surface leads with three trust attributes:

- **Secure.** Enterprise-grade, compliant, sandbox-first.
- **Composable.** Vendor-agnostic. Fits the existing estate.
- **Auditable.** Every outcome verified against a baseline the client signs.

Who Future Works serves

Large and mid-market companies running large-scale physical operations, across the United States and Canada. Not startups.

An account qualifies on three traits:

1. A real P&L problem AI can move.
2. An executive willing to sign for outcomes.
3. An operator-level champion inside the business.

Buyers to target:

Tier	Titles
Primary	CIO, CDO, CIDO, CTO (owning operations), Chief Digital and Transformation Officer, Global Head of IT and Process Excellence
Parallel	Chief Supply Chain Officer, Chief AI Officer, Chief Innovation or Transformation Officer, COO
Influencers	CEO, CFO, Procurement (frame the model as risk we absorb, and lock the value baseline with Finance in week two)
Make-or-break	The operator-level champion running delivery day to day

Size and geography. Outbound targets Core accounts only: 500+ employees, roughly $200M+ revenue, sweet spot $1B to $20B, no upper ceiling. Smaller accounts are inbound-only and never outbound. Geography is United States primary and Canada full. European-only accounts are disqualified. Keep this size framing internal: it does not belong in public copy.

Industries are proof, not the offer. The wall is 14 tiles. The first five are Tier 1 and carry active outbound. The rest are watch and inbound: we serve them and publish for them, but we do not run outbound into them in this phase.

- **Tier 1 (active outbound):** Manufacturing and Industrials, Energy, Health and Life Sciences, Logistics and Transportation, Consumer Products.
- **Watch and inbound:** Retail, High Tech, Aerospace and Defense, Agriculture and Food, Automotive, Commercial Real Estate, Chemicals, Utilities, Construction and Infrastructure.

Supply chain is a capability, not an industry. The former "Industrial Supply Chain" cluster has retired into capability 2 below.

The problem Future Works solves

- AI stalls in pilots and never reaches the P&L. BCG's own research puts the failure rate at 74%.
- Transformation programs run for years, over budget, with value promised late.
- Incumbent systems integrators bill time and materials and stake nothing on the result.

The buyer experiences all of this as risk: slow, expensive, and carried entirely by them.

The Future Works solution

AI-native transformation, value realized in twelve weeks, de-risked by design.

- **Pace.** Future Works delivers in twelve weeks what incumbents quote at two years.
- **Risk.** A third of every fee rides on a value target the client's Finance team validates. Future Works earns the final payment only when the value is proven.

Risk reversal is the product. State it plainly and let the buyer do the math.

Three reasons Future Works wins

1. **Velocity.** Twelve-week cycles, value shipped every cycle. A program is a sequence of cycles, not a multi-year commitment.
2. **Value-based fees, outcome-staked.** Fees are tied to the value delivered, not to hours. A third of every cycle fee is base, a third on delivery, and a third rides on a validated value target. Service credit if we miss. Bonus if we exceed.
3. **AI agents plus named experts.** A small pod of named senior experts, each orchestrating a fleet of high-accuracy AI agents on a proprietary, secure system. No labor pyramid. No swap-outs after kickoff.

Each pillar is something the time-and-materials labor model structurally cannot match. A pyramid cannot stake outcomes, cannot move at agent-amplified speed, and cannot keep senior names on the work.

What Future Works delivers

Four capabilities, industry-agnostic. This was five: Customer Experience and Service Operations is retired as a headline capability and folded into capabilities 3 and 4. Do not put "Enterprise" in front of the capability names, because it makes smaller accounts rule themselves out.

1. **AI Operationalization.** Move AI from pilots into the parts of the business that change the P&L. AI strategy converted into a value-accounted portfolio, with outcome and revenue tracked per use case, CFO-visible.

2. **Supply Chain and Fulfillment Transformation.** Allocation, freight discipline, SKU rationalization, working-capital release.
3. **Agentic Workflow Execution.** Order-to-cash, procure-to-pay, sales and operations planning, quote-to-cash, contracts, service operations, and sales enablement and revenue workflows. Lead with the revenue and value lift, not only cost. Absorbs the retired CX work: agentic resolution, service-desk, and escalation.
4. **Operational Resilience and Working Capital.** Margin and freight protection, inventory reduction, working-capital release. Absorbs the retired CX exception-cost reduction.

How Future Works delivers

- **The cycle: twelve weeks.** Mobilize and lock the value baseline (weeks 0 to 2). Build and deploy (weeks 2 to 9). Verify value with the client's Finance team (weeks 10 to 12).
- **The pod.** Named senior experts (Lead Architect, Principal Engineer, Data Steward, Outcome Owner) who scope, deliver, and sign off. Substitutions require client sign-off.
- **The framework.** A cross-functional pod of named experts running a fleet of AI agents on a proprietary, secure operating system. On public surfaces, describe the technology, do not name it.

The seven commitments

Every engagement is backed by:

1. Named Senior Experts
2. Value-Based Fees
3. Sub-Twelve-Week Phases
4. Change-Order-Free Sprints
5. Transparent Resource Plan
6. Vendor-Agnostic Architecture
7. Auditable by Design

Three commitments from earlier versions are retired and should no longer be used in any material: "ROI or We Pay," "Free Until Value Pilot," and "Twelve-Month Hypercare."

The guarantee

Outcome-staked fee, validated by the client's Finance team.

Every twelve-week cycle fee is split into three equal tranches:

Tranche	When	What it covers
1. Mobilization	Signature	Weeks 1 to 4: baseline lock, problem definition
2. Build and Deploy	Around Week 6	Weeks 5 to 8: solution build, validation
3. Value Verification	Week 12	Weeks 9 to 12: production, financial sign-off

The third tranche is conditional. It converts on Finance-validated Value Created against a CFO Approved Baseline locked in Week 2.

How the third tranche settles:

- **Below target.** Tranche 3 waives as cash. It converts to a Service Credit applied to the next phase. Ninety-day expiry.
- **At target.** The full base fee is confirmed. Tranche 3 invoices on financial sign-off.
- **Above target.** Future Works earns a 15% Overdrive Bonus on every dollar of validated value above target, capped on the first 24-month annualized run rate.

Cycles two and three activate through email confirmation against a published Modular Rate Card. No renegotiated SOW per phase.

The mechanics above are for commercial conversations. Keep prices, percentages, and rate-card detail out of public surfaces.

Proof

Use these to anchor claims. The numbers are signed.

Client	Result
Philips	3x return in twelve weeks, Finance-signed, self-funded the next cycle
NextTracker	75% faster time to market
JLL	A two-year AI roadmap unlocked in four weeks
Staples	Twenty digital products in twelve weeks

Trust and infrastructure: GDPR-compliant delivery, with SOC 2 Type II and ISO 27001 certification audits in progress and on schedule. Describe these as audits in progress, never as held certifications. Built on AWS, Azure, and Databricks.

Why now

AI has crossed from experiment to operating imperative. The gap between companies operationalizing AI in production and companies still running pilots is now measurable in P&L points. Buyers who wait carry the transformation risk themselves. Future Works is built to absorb that risk, prove value in a quarter, and compound gains cycle by cycle.

Ready-made copy

Category line and subhead (canonical):

> AI transformation with skin in the game.

> Outcome-based AI transformation, delivered in twelve-week cycles.

One-liner:

> Future Works is the AI-native transformation engine that delivers in twelve weeks what incumbents quote at two years, de-risked by design.

Two-liner:

> Future Works is the AI-native transformation engine. We rebuild core operations in twelve-week cycles, run by named senior experts orchestrating fleets of AI agents, with a third of every fee staked on value your Finance team validates.

Boilerplate:

> Future Works is the AI-native transformation engine. We rebuild the operations that move the P&L (manufacturing, energy, health and life sciences, logistics, and supply chain) in twelve-week cycles run by named senior experts and fleets of AI agents. Our fees are staked on outcomes, verified by our clients' own finance teams. We deliver in twelve weeks what incumbents quote at two years.

What each buyer must hear:

Buyer	The one message
CIO or CTO	Lower-risk than the current integrator. Named experts, sandbox-first, fees staked on results, built on your stack.
Chief Supply Chain Officer	Margin, freight, inventory, and working capital moved

	in a quarter, verified by Finance.
Chief AI Officer	AI in production where it changes the P&L. Not another pilot.
CFO or CEO	Future Works absorbs the program risk. A third of the fee is contingent on value your team validates.

Voice rules for vendors representing Future Works

Confident, plain-spoken, specific, expertise-forward. Write like a sharp operator explaining something, not a billboard. Lead with the buyer's problem, quantify the outcome, name the mechanism.

Use: "AI transformation with skin in the game," "outcome-based AI transformation," outcome-staked, twelve-week cycle, named experts, AI agents, value your Finance team validates. Anchor every claim to a proof point.

Never use:

- Em dashes. Use commas, periods, colons, or parentheses.
- "Asset-heavy operators" or "asset-heavy enterprises."
- Empty buzzwords ("AI-powered" with no specifics, "revolutionary," "game-changing," "best-in-class," "disrupt," "synergy," "leverage" as a verb).
- The "not just X, it is Y" construction and hollow superlatives.
- Prices, percentage comparisons, or the word "cheaper" on public surfaces.
- Named competitor comparisons on any homepage or hero surface. Named comparisons live only on dedicated pages after legal review.
- Public naming of proprietary frameworks or internal codenames. Describe the technology, do not name it.

Company name is "Future Works", two words, always.

How to describe the technology publicly: "our proprietary AI-native operating system," "proprietary agent orchestration," "the proprietary app and harnesses each expert uses to run a fleet of agents," "our value architecture framework."

Category keywords to reinforce

Primary terms Future Works owns:

- AI transformation with skin in the game (the category line)
- outcome-based AI transformation (the subhead framing)
- AI operating system
- AI-native transformation engine
- AI Native Operating Partner
- agentic workflow execution, agentic execution, agentic enterprise workflows
- outcome-based consulting
- Service as Software

High-intent clusters, use by context:

- **Enterprise AI and agentic:** AI agents for enterprise, agentic operations, agentic AI platform, AI operationalization, enterprise AI transformation, AI transformation roadmap.
- **Functional workflows:** order-to-cash automation, procure-to-pay automation, S&OP optimization with AI, supply chain AI agents, finance operations AI.
- **Commercial and risk:** outcome-based pricing, performance-based AI consulting, AI proof-of-value pilot, fixed-price AI transformation, ROI-guaranteed AI consulting.

Terms to retire: "asset-heavy operators" and "asset-heavy enterprises," web design, website development, app development, UI UX, digital product, digital transformation (use "AI-native transformation"), future of AI, innovation strategy, and vertical-as-offer phrasing such as "real estate solutions" or "aerospace digital transformation."
